Final Words. Both the 2 stroke and 4 stroke engines have their unique way of running your vehicle. If you are a type of person who needs more power and doesn't care to spend more money on oil and lubricant and doesn't bother about how it sounds, then you can go with a 2 stroke engine.

Comparison of 2 Stroke vs 4 Stroke Engine The following are the major differences between the 2 stroke and the 4 stroke engines. one of the major difference between the 2 stroke engine and the 4 stroke engine is that the method of taking the charge(Air/fuel mixture) into the cylinder. And exhausting the combustion products from the cylinder.

Conversely, a 4-stroke engine requires multiple cylinders to get consistent power generation. Picture this: The four stroke engine produces power on 1 in every 4 strokes, whereas the 2-stroke engine produces power on every other stroke or 1 in every 2 strokes.

Disadvantages of a Two-Stroke Engine . Less Fuel-Efficient: Older model two-stroke outboards produce uniform power, but the engine is not as fuel efficient as a four-stroke. Increased Pollution: Due to the addition of oil to fuel, this type of engine is also more polluting in older 2-stroke models.

The basic and main difference between two stroke and four stroke engine is that the crankshaft complete one revolution in one power stroke in 2 stroke engine and complete two revolution in one power stroke in four stroke engine. So the 2 stroke engine give high power compare to 4 stroke engine but the 4 stroke engine is more fuel efficient.

ADVANTAGES OF 4 STROKE ENGINE :-More torque :-In general, 4 stroke engines always make extra torque than 2 stroke engine at low RPM.Although 2 stroked ones give higher torque at higher RPM but it has a lot to do with fuel efficiency.

A compression stroke compresses the fuel which then explodes. The return stroke, called the power stroke, is driven by the exploded fuel. It moves the crank case, releases exhaust gases, and lets in new fuel and air for the next stroke. Illustration of a four stroke engine. A 4 stroke engine makes four strokes to drive the engine.

A four-stroke (also four-cycle) engine is an internal combustion (IC) engine in which the piston completes four separate strokes while turning the crankshaft. A stroke refers to the full travel of the piston along the cylinder, in either direction. The four separate strokes are termed:

The piston makes two complete passes in the cylinder to complete one operating cycle. An operating cycle requires two revolutions of the crankshaft. When compared to 2 stroke engines, 4 stroke engine have greatly increased number of moving parts and therefore, it is more compact and significantly heavier. The Difference

What is the comparison between a 4-stroke petrol engine ...  
In general, 4-stroke engines almost always make more torque at low RPM than 2-strokes. This extra torque has a lot to do with the efficiency of the fuel burn; a 4-stroke uses almost all of its fuel to impart power to the crankshaft, whereas fuel crossover in a 2-stroke means that it will produce less power per RPM. 2-strokes do enjoy an advantage in high-RPM power output, but simply don't ...

### 2-Stroke Vs. 4-Stroke Engines: What's The Difference?

A petrol engine can be either 2 stroke or 4 stroke. The difference is that air and petrol are fed to a cylinder of the engine through ports or valves of a petrol engine. The piston compresses this mixture and just before the piston reaches the end of its stroke a spark

### How Four Stroke Petrol Engine Works

A 2 cycle engine completes a combustion and exhaust cycle in only 2 strokes of the piston, with a 4 cycle taking 4 strokes of the piston. 4-Stroke Engine. For a 4 cycle engine, there is a power stroke (piston down) which is caused by combustion of the fuel mixture.
