*Marine cooling systems |Cummins marine engine|COOPAL*

A car engine produces a lot of heat when it is running, and must be cooled continuously to avoid engine damage. Generally this is done by circulating coolant liquid usually water mixed with an antifreeze solution through special cooling passages. Some engines are cooled by air flowing over finned cylinder casings.

*Toyota 4A-F and 7A-FE engines: details and photos*

The simplest internal combustion engine cooling systems do not involve coolant - they are air-cooled. Rejecting engine heat directly to the surrounding air greatly simplifies its removal from the engine, and eliminating heat exchangers from the heat flow path greatly reduces inefficiencies that can limit system performance. Air-cooled
