Scientists say that is in fact possible to clone a human by using the famous SCNT. A cell, which contains DNA, is taken from the person who is being cloned. Then the enucleated egg is fused together with the cloning subject's cell using electricity. This creates an embryo, which is implanted into a surrogate mother...

Cloning: Types, Technique, Animals and More

Genetic engineering as the direct manipulation of DNA by humans outside breeding and mutations has only existed since the 1970s. The most common form of genetic engineering involves the insertion of new genetic material at an unspecified location in the host genome.

- Human development: Cloning could enhance and advance human development. The cons or disadvantages of human cloning raise moral, ethical and safety issues:
- Reproductive cloning: The negatives of human cloning including the making of designer babies.
- Human cloning: Could be a violation of the clone's individual human rights.
