"Machine Learning (ML)" and "Traditional Statistics(TS)" have different philosophies in their approaches. With "Data Science" in the forefront getting lots of attention and interest, I like to dedicate this blog to discuss the differentiation between the two.

## Data science - Wikipedia

The technical approach to information systems emphasizes mathematically based models to study information systems, as well as the physical technology and formal capabilities of these systems. The disciplines that contribute to the technical approach are computer science, management science, and operations research.

My third course in statistics, a great one taught by Professor Hamburg at Wharton, and the only good course in this field I ever took. Calculus based. The key to my success was a marvelous secretary in the statistics department who, with Hamburg's approval, gave me the answer book to the questions in the textbook.

In this book you will find the basics of probability theory and statistics. In addition, there are several topics that go somewhat beyond the basics but that ought to be present in an introductory course: simulation, the Poisson process, the law of large numbers, and the central limit theorem. Computers have brought many changes in statistics.

The Bayesian approach to statistics is beautifully simple Uncertainty is represented by probability I Explain the difference between likelihood, confidence, probability and a p-value. Bayes theorem used to combine probabilities  $P(X|D) = \frac{P(X)P(D|X)}{P(D)}$  posterior /prior likelihood However, while philosophically this is simple and the same in every
