Our Guide to Fire Stopping What is fire stopping? Fire stopping is best defined as the sealing of any openings to prevent fire (including smoke and heat) from passing through multiple building compartments. The spread of a fire is contained by creating fire resisting compartments, which subdivide the building (vertically or horizontally).

Firestop Products and Systems - Product Catalog, Technical ...

the details of construction, and the penetrations – such as doors, windows, ducts, pipe chases, and electrical raceways. Although the hourly ratings of fire endurance do not always represent the actual time the barrier can withstand a building fire, un-penetrated fire-rated barriers seem to perform rather well.

www.asfp.org.uk

As your experienced partner in firestop protection, 3M can help you find the system that suits your needs. You can even combine documents from our system selector, product catalog and technical library to create a customized document for your proposal submittal.
