Problem 1 { (a) Consider the situation in the figure, every edge has the same weight and $|V| = n = 2k + 2$. Easy to check, every simple path from s to t is a shortest path and the number of such paths is $2^{k+1} = 2^{n/2}$ which grows faster than any polynomial function of n .

My favorite is Neapolitan's, because 1. It covers both design paradigms and complexity analysis. Kleinberg's focus on
