Sharing professional SAP BI/BO experience. Friday, January 15, 2010. FOX Help Formula Calculation Overview of Features The planning function of type Formula Calculation offers you a simple programming language for manipulating transaction data. It includes elements that can be found in many macro languages for business applications:

~~Formula-Variable~~

I have also done that which the same example but that would be another blog. Another possibility is to create an own planning function type based on an AMDP class. This is what I would like to show now. The fox formula is distributing data from montly level to daily level. But it is only doing that for working days.

~~Fox-Formula-In-Sap-Bi~~

SAP Business Intelligence Integrated Planning (SAP BI-IP) provides the standard allocation formulas which are used for basic allocation requirement. For more complex business cases, standard formulas are not able to fulfill the requirement and in this case FOX which comes with SAP BI-IP can fulfill the complex development requirements.

Introduction Working with Integrated Planning is about supporting the planning process with a common plan database and with planning functions that accelerates the work of the planners. Until now we had many options to define planning functions and for the complex ones we could use Formula Extensions - shortly FOX - or ABAP.

In Fox formula (planning funtion type ORSPL_FORMULA), there are three functions for variable: VARV, VARC, VARI. Let's use some examples to know how to use it.

~~SAP-BPC-10.1-Debugging-Fox-Formulas~~

Introduction. Before BW 7.3 SP 11 there was no standard way to debug Planning Functions of type Formula which were written in FOX. But with BW 7.30 SP 11 SAP provided a debugging script that allows us to easily debug the FOX code .There are some other workaround methods which can be used for debugging and were used when the script was not available but these are not very convenient to use and ...
