An improved method for the preparation of graphene oxide (GO) is described. Currently, Hummers' method (KMnO4, NaNO3, H2SO4) is the most common method used for preparing graphene oxide. We have found that excluding the NaNO3, increasing the amount of KMnO4, and performing the reaction in a 9:1 mixture of H2SO4/H3PO4 improves the efficiency of the oxidation process.

Port Manteaux churns out silly new words when you feed it an idea or two. Enter a word (or two) above and you'll get back a bunch of portmanteaux created by jamming together words that are conceptually related to your inputs.. For example, enter "giraffe" and you'll get back words like "gazellephant" and "gorildebeest".

X-rays make up X-radiation, a form of high-energy electromagnetic radiation.Most X-rays have a wavelength ranging from 0.03 to 3 nanometres, corresponding to frequencies in the range 30 petahertz to 30 exahertz (3×10<sup>16</sup> Hz to 3×10<sup>19</sup> Hz) and energies in the range 100 eV to 200 keV.X-ray wavelengths are shorter than those of UV rays and typically longer than those of gamma rays.
