Similar mechanisms are extensively applied in computer science in the domains of genetic algorithms and evolutionary computation, which develop solutions to complex problems via a process of variation and selection. Author D. B. Kelley has formulated one of the most all-encompassing approaches to universal Darwinism.

Universal Darwinism - Wikipedia

In computer science and operations research, a memetic algorithm (MA) is an extension of the traditional genetic algorithm. It uses a local search technique to reduce the likelihood of the premature convergence. Memetic algorithms represent one of the recent growing areas of research in evolutionary computation. The term MA

Association rule hiding is one of the privacy preserving techniques which study the problem of hiding sensitive association rules. There are many algorithms and techniques were developed to solve this problem. In this research work, we have used genetic algorithm optimization technique for protecting sensitive association rules.
