Karyotypes Flashcards | Quizlet

karyotype. In this investigation, you will use a sketch of chromosomes to make a karyotype. You will also examine the karyotype to determine the presence of any chromosomal abnormalities. Problem How can chromosomes be observed? Pre-Lab Discussion Read the entire investigation. Then work with a partner to answer the following questions. 1.

Honors Biology Class Handouts - Mr. M.N. Baker

Human Genetics: Making Karyotypes Ch. 14 Procedure 1. Observe the normal human karyotype in Figure 1. Notice that the two sex chromosomes, pair 23, do not look alike. They are different because this karyotype is of a male, and a male has an X and a Y chromosome. Figure 1 2. Identify the centromere in each pair of chromosomes.

Karyotyping Activity Introduction This exercise is a simulation of human karyotyping using digital images of chromosomes from actual human genetic studies. You will be arranging chromosomes into a completed karyotype, and interpreting your findings just as if you were working in a genetic analysis program at a hospital or clinic.

Laboratory Activity #18 - Making Karyotypes

Making Karyotypes Introduction Several human genetic disorders are caused by extra, missing, or damaged chromosomes. In order to study these disorders, cells from a person are grown with a chemical that stops cell division at the metaphase stage. During metaphase, a chromosome exists as two chromatids attached at the centromere.

123 Laboratory Manual A/Chapter 14

To make a karyotype, scientists take a picture of someone's chromosomes, cut them out and match them up using size, banding pattern and centromere position as guides. Homologous pairs are arranged by size in descending order (largest to smallest) with the sex chromosomes (XX for female or XY for male) as the last or 23 pair.

karyotyping Flashcards | Quizlet

Where is the karyotype used extensively? In the HGS (Human Genome Study) What type of chromosomal abnormalities can be detected by using a karyotype? Sex cells with abnormal number of chromosomes due to nondisjunction (usually causes embryos that are not viable) Down Syndrome.
