Regardless of what your manual transmission uses, the fluid or oil's primary function is lubrication—preventing metal-to-metal contact between the meshing gears. Gear oil is different from engine oil. For starters, gear oil can come in much higher viscosity ratings. In other words, a 80w-90 gear oil is much “thicker” than a 5w-30 engine oil. But viscosity is only part of the equation. Here's why: Manual transmissions are often made up of different metals.
