C where n is the common integer representing the number of columns of A and the number of rows of B (l and $k = 1, 2, \dots, n$).
Addition If $A = (a_{ij})$ and $B = (b_{ij})$ are two matrices of the same size. $m \times n$, the sum $A + B$ is the $m \times n$ matrix $C = (c_{ij})$ where. $c_{ij} = a_{ij} + b_{ij}$.

A formula sheet won't be very helpful, especially since there are literally hundreds of them throughout MERM. Concentrate on being able to quickly identify the material and where it is located in MERM. This also enables you to quickly go over the surrounding material when applying a formula, as opposed to blindly applying it from an equation sheet.

Not worth doing in my opinion haha. It's a fantastic resource, but it's essentially a 200 page equation sheet with equations for many engineering subjects. Although if you do want to go down the rabbit hole, you can download it for free and it would probably have any other equations you might want to add.
