simply spectators. Canceling the spectator ions from both sides of an ionic equation remains the net ionic equation that includes only the substances and ions that actually remains in the reaction as water, gas, insoluble solid (precipitate), weak electrolyte, and no electrolyte.

A net ionic equation shows exactly what reactants are involved in the reaction. It allows us to see what caused the solids, liquids, or gases to form. A metathesis reaction is when cations and anions switch partners (double replacement reaction). The ions switch partners

Rules for Writing Net Ionic Equations 1. Write the overall balanced “molecular” equation. 2. Rewrite the molecular equation so that only soluble, strong electrolytes are separated into their ions. 3. Eliminate all species common to the reactants and products (spectator ions).
