Object-Oriented Programming Languages. Object-oriented programming (OOP) languages are designed to overcome these problems. The basic unit of OOP is a class, which encapsulates both the static attributes and dynamic behaviors within a "box", and specifies the public interface for using these boxes. Since the class is well-

C programmers have been using something like object oriented programming for years. They called it good modularity. The classic example of "object-oriented C" is the standard FILE structure and its family of functions fopen, fclose, fread, fwrite, fprintf, etc. Only the "methods" of the file object,
