Elementary Differential Equations 10th Edition ... - Chegg
Elementary Differential Equations with Boundary Value Problems is written for students in science, engineering, and mathematics who have completed calculus through partial differentiation. If your syllabus includes Chapter 10 (Linear Systems of Differential Equations), your students should have some preparation in linear algebra.

The general solution of the differential equation is $C_1 e^{-\lambda t} + C_2 e^{\lambda t}$. This is exactly the form given by Eq. 2.1.1 in the text. Invoking an initial condition $C_1 + C_2 = 1$, the solution may also be expressed as $C_1 e^{-\lambda t} + C_2 e^{\lambda t} / (e^{-\lambda t} + e^{\lambda t})$.

solution is $y = C_1 e^{2x} + C_2 e^{-2x}$. From elementary physics, it follows that $y(0) = 1$. Therefore $C_1 + C_2 = 1$. Note that $y'(0) = 0$. Note that $y'(x) = 2C_1 e^{2x} - 2C_2 e^{-2x}$. Therefore $2C_1 - 2C_2 = 0$. Therefore $C_1 = C_2 = \frac{1}{2}$. Therefore $y = \frac{1}{2}(e^{2x} + e^{-2x})$.
