- Prime quality galvanised steel. Engineered design Manufacturing an engineered truss requires accurate cutting, jiggling and pressing. Fabricators do not want timber splitting or truss plate teeth bending during pressing as this can result in production delays, site calls and increased costs of repairs and rebuilding.

The use of timber as trussed rafters for roof of buildings is a very popular alternative all over the world. The aim of this post is to show the design example of a timber roof truss (trussed rafter). As a direct product of nature, timber has so many variable properties that are more complex than that of concrete, steel, bricks, or aluminium.
